

Open iTunes and click the airplay button to see a list of devices on your network.

Open your browser and type the name of the device you want to access with .local after.

Additional info:

If your device name contains spaces, leave these out when entering the name in the browser.  
Example: H190 Living Room --> H190LivingRoom.local

If you have special characters in your device name or this guide did not work, please reset the device to factory settings and try again.

Factory reset: On most products this is done by holding the dac+ and mute buttons at the same time. On products without this option (H90) you can hold the Play button for 5 seconds to enter the menu and reset the device from there.
